

GARDEN EZEE AFTERCARE TIPS ©

ARTIFICIAL GRASS

All Garden Ezee artificial grass installations come with a product warranty and recommended guidelines to care for your new lawn.

The following guidelines will help to keep your new lawn in good condition for around 12 – 15 years after installation.

- Remove all debris regularly. Don't allow leaves or other matter to build up.
- Brush with a 'soft to medium' bristle brush once a month. Firstly, brush the grass in all different directions, then brush against the pile. This helps to keep the grass maintained in a vertical position and avoids compaction.
- Remove any moss or weeds that take root early after installation. Either by hand, or apply a water-based moss & weed killer. Speak to your local garden centre for their recommended product.
- Clean up regularly after pets. Wash any soiled areas with lukewarm light soapy water.

To maintain your warranty, we recommend the following to avoid damage/melting hazards:

- Do not use a high strength cleaning liquid such as bleach.
- Do not have open bonfires, or ignite fireworks on, or close to your new lawn.
- Do not use charcoal BBQs, firepits etc. on your new lawn. Gas BBQs are normally fine if cooking is supervised, and the heat is sufficiently above the grass. We recommend a small test with an off-cut before trying the real thing.
- Take care with cigarettes. Make sure they are not dropped carelessly.
- Avoid chewing gum or adhesives getting into the grass. Like hair, it may get stuck and need to be 'cut out'.
- Keep your lawn clear of broken glass and small sharp objects to stop these burying themselves into the membrane.
- Avoid parking cars, motorbikes or heavy vehicles on the grass for sustained periods as this will cause compaction.
